Registration numbers- 180911324, 180911340, 180911342

Roll numbers- 53, 56, 57

Batch- B5

Date of submission- 10/04/2021

Problem Definition-

Prediction of used car prices based on the characteristics of the car, like the year the car was bought, kilometers driven in the by the previous owner, fuel type etc. Various other features of the car will also be considered.

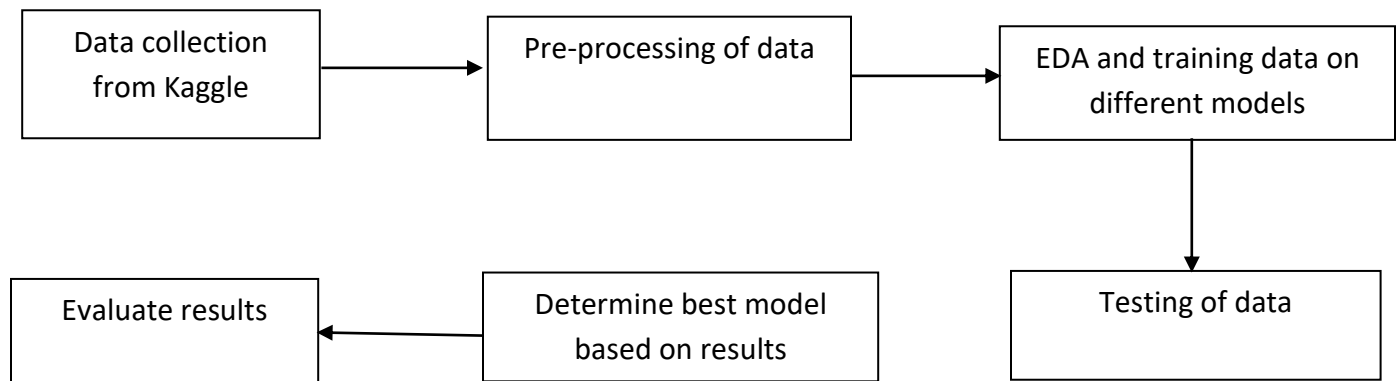

Objectives-

- Determine the price of a used car.
- Find out the best model for best results.
- Building an accurate model.

Technologies- Rapid Miner

Algorithms- Decision tree, random forest

Methodology-

Expected Results- A model that works well on training and testing data with good accuracy.
